## *The Phone Revelation*

by Serhiy Grabarchuk, Jr.

1234567890

A phone number on the business card is hidden below the pen. The number contains all ten digits.

It is known no two adjacent digits in the phone number are the neighboring numbers from the row in the left corner. For example, 3 isn't next to either 4 or 2. Please, note that 0 cannot be next to 9, though it can be next to 1.

Can you reveal the phone number?
